

**Steve Sokalski**  
*Instructor, Building It Right*

Steve Sokalski has been working in the safety field since graduating from the British Columbia Institute of Technology's Occupational Health & Safety program in 1987. As a member of the second graduating class, Steve has seen many changes within the occupational health & safety field over the past 30 years.

Specializing in construction related safety, Steve has applied his skills and knowledge in residential, commercial, marine, and institutional construction projects. Steve incorporated his first business in 1989, where he provided health & safety consulting services related to the hazardous materials field. Serving many governmental organizations, Steve developed and implemented a comprehensive asbestos assessment tool and management plans for over 400 buildings.

Steve sold his business in 1994 to pursue a wider offering of construction safety consulting services. He started his second business and started serving in the residential development industry, where he has been working with many of Vancouver's largest development firms and construction companies.

Possessing both the Canadian Register Safety Professional (CRSP) and the Certified Safety Professional designations, Steve is a dedicated safety professional capable of working anywhere in North America.

Steve continues to provide a wide variety of safety consulting services to developers throughout North America. Steve provides pre-purchase hazardous materials due diligence building assessments, regulatory compliance issues, incident investigations, pre-demolition hazardous materials assessments, construction safety plans, fall protection plans, construction fire safety plans, confined space assessments, training and prevention through design / Hazops assessments.
